***********************************FakeBank***********************************

The CEO of FakeBank received an anonymous tip saying that one of the workers from

the accounts department may be planning an action against the bank for personal profit.

After looking around for a while he began to narrow down the options to one particular

office in the accounts department.

The bank's security team set up a network sniffer on the suspected office network

There are 4 workers in the office, each have their own PC and the internal

network address range is   **10.10.0.0   10.10.255.255**
